Forecast for Monday 22 Mar 2021

Weather: A dry and bright start to the day with plenty of spring sunshine, generally dry all day but becoming a bit cloudier later in the day and possibly quite dull at times during the evening.

Chance of cloud free mountain/hill tops above 800m: 80% chance, scattered low cloud around in the far west and south.

Visibility: Generally good visibility with some excellent views around the fell tops but some lower cloud forming at times around the exposed south and western slopes, this will be around 600m and above.

Forecast for Monday 22 Mar 2021

Meteorologist's View

A significant wind chill is expected at height but freezing level is around the hill tops.

Forecast for Tuesday 23 Mar 2021

Weather: Cloudy overnight but mainly dry. Largely dry on Tuesday morning but becoming increasingly cloudy as a front approaches from the west later in the day bringing some light rain in the evening. Falling as snow on the higher fell tops.

Maximum wind: Southwesterly 15mph gusts 25mph increasing 25mph gusts 40mph by later in the afternoon.

Chance of cloud free mountain/hill tops above 800m: 60% in the morning, lowering to 40% in the afternoon.

Visibility: Some lower cloud forming at 600m particularly in the west in the morning, low cloud becoming broken around 500m and above. Best chance of clear tops will be in the east and north of the national park.

Temperature: **Valleys:** Plus 5 rising to plus 8 Celsius.
At 800m: Plus 1 Celsius.
Freezing level: around 1000m

Ground Conditions Supplement

Date: Sunday 21 March 2021 Location: Helvellyn summit at 1140 Full report: The remaining snow cover is continuing to thaw at all levels and the vast majority of paths can now be followed without setting foot on snow. However Striding Edge still presents a significant winter hazard with a steep bank of snow above a large drop on the exit slopes to the Helvellyn plateau. The snow was soft and granular today but firmer where it has been compressed by walkers feet. Due to the serious consequences of a slip here the security of an ice axe and microspikes would be a very sensible addition to your equipment for anyone tackling the Helvellyn Edges. Swirral Edge has less snow cover but there is still a very short section to cross. The rest of the remaining snow is generally to be found on steep N through E aspects above 750m and in sheltered hollows and gullies. Cornices still exist above many steep slopes mainly but not exclusively those with a N through E aspect. These are very unstable in the warmer temperatures so please give them a wide berth and advise others with less experience to do likewise. Temperature: plus 3.5 C Maximum wind speed 10.9 mph Wind chill: minus 0.5 C Average wind speed: 7.1 mph
